PROFESSIONAL SUMMARY

Aspiring AI/ML Engineer with hands-on experience building LLM-integrated tools, agentic workflows, and full-stack products. Comfortable with prompt engineering, LLM APIs, and rapid iteration — proven by co-founding an AI startup, publishing peer-reviewed ML research, and shipping an LLM-powered workflow builder. Strong Python and API fundamentals paired with a customer-facing, problem-solving mindset; looking to build and deploy real-world conversational/voice AI agents.

EDUCATION

Vellore Institute of Technology, Bhopal

Bhopal, India

Bachelor of Technology, Computer Science (AI & ML) — CGPA: 8.28/10.00

Sep 2023 – May 2027

International School

Patna, India

Intermediate — 72% | 2022 – 2023

RELEVANT SKILLS

- **AI / LLM:** LLM APIs, Langchain, Prompt Engineering, Agent/Agentic Workflows, RAG fundamentals, TensorFlow, XGBoost
- **Languages & Frameworks:** Python, JavaScript, Node.js, FastAPI, React, C++
- **Integrations & Tools:** REST APIs, OAuth-based integrations, GitHub API, Git/GitHub, MongoDB, SQL
- **Coursework:** Deep Learning, Machine Learning, OS, OOPS, DBMS, Data Structures & Algorithms, Computer Networks

EXPERIENCE

Co-Founder | DevRA — AI-Powered CI/CD Reliability Platform

June 2026 – Present

Python, TensorFlow, XGBoost, Node.js, MongoDB, GitHub API | Remote

- Co-founded and lead the AI/ML architecture for an AI-powered CI/CD reliability platform, designing predictive risk-scoring models on pipeline telemetry to target a 40–70% reduction in deployment failures.
- Lead integration between AI/ML and DevOps workstreams across a 4–8 member team, coordinating rapid build-test-iterate cycles similar to tuning an agent against real usage patterns.
- Designed GitHub and CI-provider integrations (OAuth-based ingestion) for real-time monitoring — direct experience wiring AI systems into third-party APIs and live data sources.

PROJECTS

NodeStream: Visual Data Pipeline Builder

React, FastAPI, React Flow, JavaScript, Python

- Built a drag-and-drop canvas for composing multi-step automations — including LLM, API-call, transformation, filter, and file-save nodes — conceptually close to designing and chaining an agent's conversation/tool-use flow.
- Implemented a FastAPI backend with real-time DAG validation to catch invalid workflow logic before execution, the same guardrail-and-test discipline needed to keep production AI agents reliable.

Shop IQ: Predictive Dynamic Pricing Optimization

Python, Scikit-Learn, XGBoost, React, Node.js

- Architected a machine learning pricing engine using XGBoost regression to predict optimal e-commerce price points from competitor analysis.
- Authored and published a peer-reviewed paper (IEEE, 2025 International Conference) showing an 18% profit margin increase via automated dynamic price adjustments.

POSITION OF RESPONSIBILITY

Technical Team (Core Member) | Android Club, VIT Bhopal University

Jan 2024 – Present

- Built and deployed a community platform automating tracking for 500+ active users (+40% engagement).
- Led 10+ workshops mentoring 200+ students on hardware-AI integration — direct, repeated experience translating technical concepts for a non-technical audience.

ACHIEVEMENTS

- Published first-author research paper, “Shop IQ: The Intelligent Pricing Engine Transforming E-Commerce Through Advanced ML Techniques,” 2025 International Conference — IEEE Xplore.
- Solved 200+ coding problems across LeetCode, GeeksforGeeks, and CodeChef.
